

Body Builder

a) On the diagram of the male abdominal cavity above, what is the circled part?

b) Choose words from the box to fill the blanks in the sentences:

testes	penis	rapidly
duct	epididymis	scrotum
swim	cooler	semen

The are suspended in the scrotal sac (or) just behind the penis. The testes are positioned outside the main body cavity and are slightly than the rest of the body. This is important because sperm develop more in cooler conditions.

Sperm are made in the testes and stored in the coiledFrom here they travel through the sperm to the urethra which runs through the centre of the

The prostate gland adds a fluid which helps the sperm to vigorously. Together with the sperm, this makes
